7. Integrating and building AI as well as software knowledge, Program Knowledge, requires versatile vendor support.
8. Artificial intelligence can be on a business, idea, program, software you want, on different and various topics.
9. The manufacturer needs to use versatile programs and software on Artificial intelligence.
10. Artificial intelligence can be built on system programs and software, applications and game engines.
11. Artificial intelligence can be built upon need on office, business, accounting, banking, and various professions.
12. It is important that the artificial intelligence produced is built in line with the working factors and what solutions and needs.
13. The definition of artificial intelligence may vary from person to person on the available drafts.
14. The Architectural program and software to be used as Artificial intelligence, which is started to production, must be the latest version and up-to-date licensed.
15. In projects started as artificial intelligence, the algorithm that will be able to debug the errors of the experts who have gained experience in writing and producing code and that will produce the correct mathematical results of the codes perfectly, has been prepared on the right result. will bring results.
16. The Experienced Person in the Field of Artificial Intelligence should notify the Project Owner, which programs and software he/she has worked on before in the field of Artificial intelligence production, who can provide technological references.
17. It is important that your produced artificial intelligence Projects are licensed and you are the Full Owner of your rights.

AIs are available after Tests and Activities and whether they are open for improvement depends on the quality of the Builder's Build level.

NOW YOU HAVE AN ARTIFICIAL INTELLIGENCE BUT NOT ABLE TO SERVE EVER?

It shows how the functions and functions of artificial intelligence that will come out of the producer's hand, should be enriched in terms of usability and talented in terms of capability, and will be a part of the awareness and entrepreneurial intelligence of the producer.

FACTORS IN ARTIFICIAL INTELLIGENCE

01

DATABASE

Your Personal Ideas We stand by your preferences that work well.

02

PROGRAMS

You get the best results on the right Center of your business awareness

03

SOFTWARE

Transactional solution result as your Code Architectures live the Life of Accuracy

04

RESOURCES

Dozens of Resources other than One Option

05

LİCENSE

Correct Anesthesia Successful detection

06

BRAND AWARENESS

Thanks to production, you can have an artificial intelligence
